

Site Development Pay Station Island Forms

PART NUMBER: PS-100

Description

Shave thousands of dollars and countless hours off of the installation process of DRB Systems Xpress Pay Terminal (XPT) islands with our prefabricated solution. Pay Station Island Forms are engineered to promote exact placement of all services to the XPT including (1) gate loop, (2) FastPass reader and (3) power and data required for the XPT itself.

When Pay Station Island Forms are in use, the purchase of a DRB Xpress Pay Terminal Base is not required. This saves you approximately \$1,000 for every XPT island that is installed!

Most importantly, you will rest assured that the services are all located properly after the concrete is down and that everything will fit perfectly when your XPT, FastPass reader and gate loop services are installed!

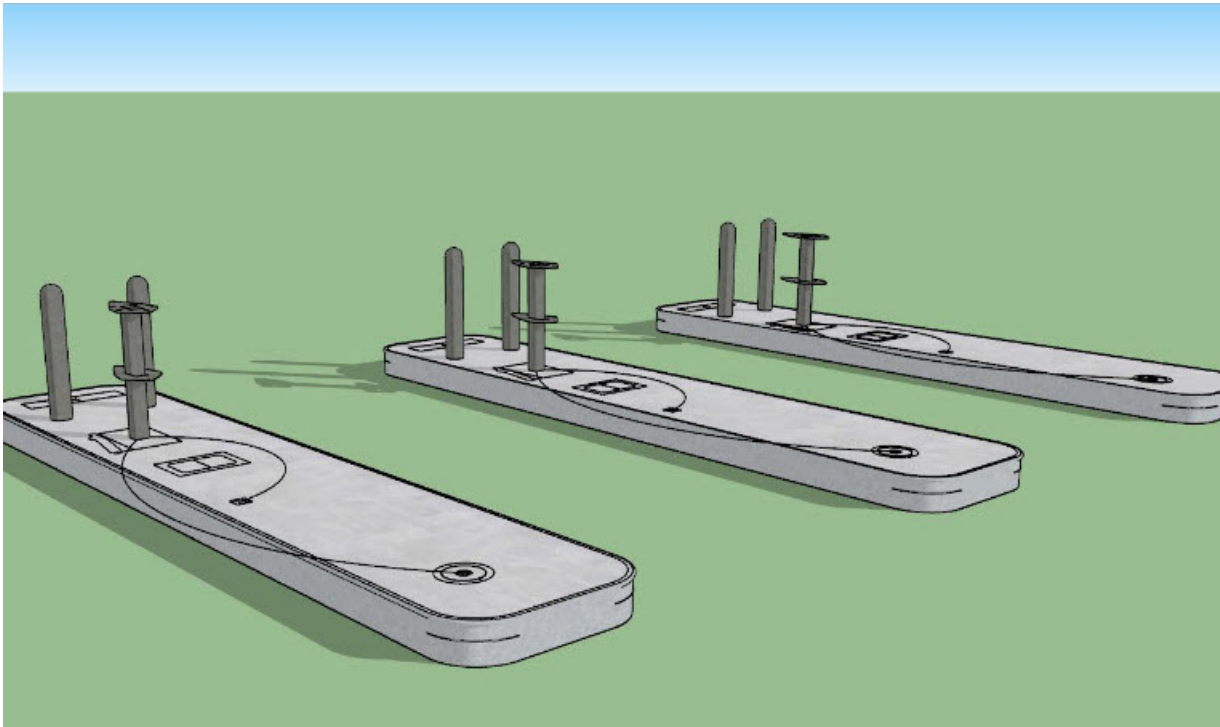

Features and Benefits

- Save money and headache with engineered solution to place all services required for the DRB XPT pay station
- Save contractor time and expense during concrete pour of pay station islands
- Save electrical contractor time and expense (estimate 8 hours per pay station island) with pre-engineered solution
- Save \$1,000 (approx) per island in direct costs from DRB Systems for each XPT Base

About Spotless

We create innovative products that serve a specific purpose and that are built to last for the car wash industry. As car wash technology evolves, we have found that quality, interoperability and servicability of products has continued to deteriorate. Spotless brings the fresh perspective of an active car wash operator who is developing and designing products that are of the highest quality, easy to service and made of the most durable materials.
